**DevLUp FSU**

 **GBM #10** 

November 14th, 2024

**Welcome!**

# Next Few Weeks

Date	Week #	GBM Title	Secondary Event	Presenter
29 Aug	1	(No Meeting)	Involvement Fair	
5 Sep	2	Intro to Club and New Club Project		Club
12 Sep	3	Intro to Game Design		Chris
19 Sep	4	Intro to 3D Game Dev in Godot		Dion
26 Sep	5	Intro to 3D Modelling in Blender		Jake, Parker, Emma
3 Oct	6	Blender Animations		Ares
10 Oct	7	Blender Materials		Parker, Jake
17 Oct	8	Pixel Art		Ares, Emma
24 Oct	9	Tile Maps		Jake, Ares
31 Oct	10	Spooky Game Night Social	CANDY FOR ALL (No Candy)	Jack Skellington
7 Nov	11	Writing for Games		Emma, Chris
14 Nov	12	UI Design		Emma, Jake
21 Nov	13	3D Math		Dion
28 Nov	14	Thanksgiving Break		
5 Dec	15	Goodbye Chris Social		Chris
12 Dec	16	Finals		

# Next Wednesday: Talk with PlayStation Career Manager

Talk with PlayStation about  
their Summer Internship  
Program!

NEXT WEDNESDAY 4PM  
ONLINE

Link will be sent out soon on  
discord

#👁👁showoff **recap**

# What exactly is User Interface in Games?

- Game UI is a broad category that includes on screen gameplay elements like health bar and abilities, as well as menus and systems like an inventory or skill tree
- Video games have common on screen UI components that help players navigate, find information, and accomplish goals
- Signify to the player different game mechanics, player and environmental conditions, and progress

# How is the UI separated in this image?

Now there is a new piece of UI on the screen 😲

# There are two types of UI in Games

- Persistent
  - Stays on screen throughout gameplay
- Conditional
  - Only appears when the player needs to see it

# Conditional UI is the real MVP

Nearly all the UI in Eldin Ring is conditional

# Why Conditional UI

- We need to think about what the player needs to see at a certain time
- For example, does link really need to know how many rupees he has during the final boss fight with Ganon?
- No!

The background features a series of overlapping, dark gray geometric shapes, including rectangles and chevrons, creating a sense of depth and movement against a solid black background.

Let's look at an example of innovative UI

# One common function in games is stamina

- Conventionally stamina is shown as a green bar that goes down when the player performs strenuous actions like sprinting or climbing

Breath of the wild took this bar and made it a conditional

# *Circle*

And instead of in the corner, they put it right on top of the player

# This Stamina Wheel is an AWESOME Piece of UI

- When you are using stamina, it's right in your eyeline
- When upgraded, it stays compact and unintrusive
- Appears sleek and streamlined

These techniques may seem obvious in hindsight, but this isn't the traditional way stamina is visualized.

[https://youtu.be/yGkG3VGWtIs?si=sWoFs\\_wn01Nlki7g](https://youtu.be/yGkG3VGWtIs?si=sWoFs_wn01Nlki7g) <- Video geeking out on breath of the wilds stamina wheel

# Aiming in FPS Games!

## *Crosshair/Reticle*

It can be simple, or more complex, sniping, punching, mining, depends on task

## What about dialogue?

- Dialogue is a very important aspect of UI in more story based games
- How do you want to display your dialogue? What does your genre generally use?
- Do you want to have a choice menu? How do you want to display it?

In a lot of pixel games, there's usually a more detailed version of the person when you talk to someone

# Types of dialogue in your favorite games

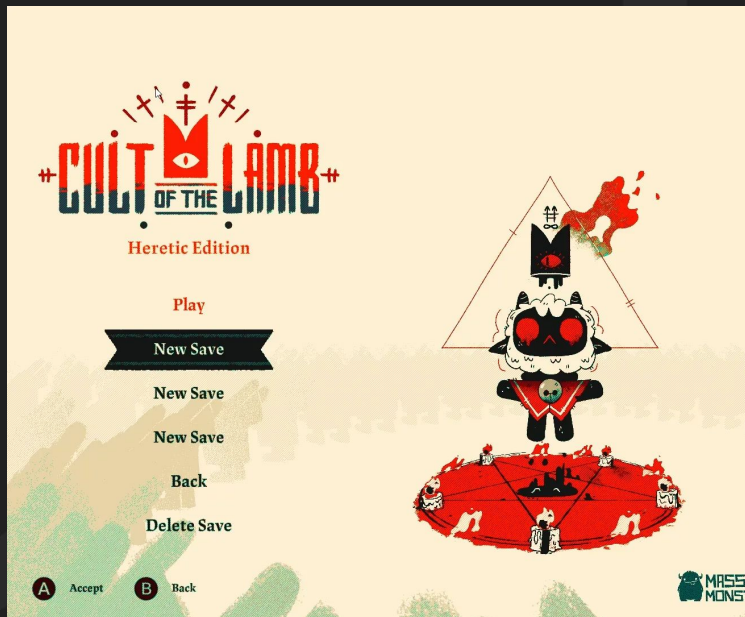

# Things to consider

- Clear Character Indicators
- Readable Text and Font Choices
- Choice Indicators (Morality, special side quests)
- Pacing and Speed Control
- Subtitles and Accessibility Options
- Emphasis on Tone and Emotion
- Ambient Dialogue Integration (NPC chatter or background conversations)

Nobody is going to read that.

# Menus

# Who Cares About the Menu?????

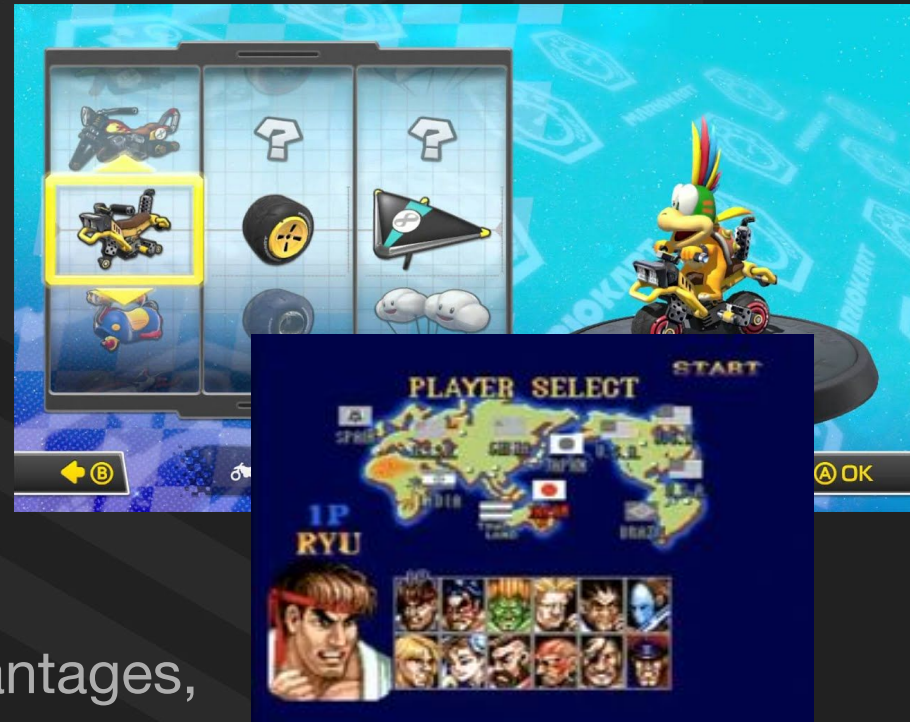

- Main Menu
    - Helps you choose between a new or saved game
  - Inventory Screens
    - MINECRAFT, and many other games, v important
  - Pause Menu
    - Can get to settings, pauses the game, save the game
  - Settings
    - Helpful for obvious reasons, change controls, make multiplayer, etc.
  - TECH TREES!
- 
- A screenshot of a Minecraft inventory screen. The inventory is organized into four rows. The first row contains a wooden pickaxe, a wooden shovel, a wooden axe, and a wooden hoe. The second row contains a wooden sword, a wooden bow, a wooden crossbow, and a wooden staff. The third row contains a wooden pickaxe, a wooden shovel, a wooden axe, and a wooden hoe. The fourth row contains a wooden sword, a wooden bow, a wooden crossbow, and a wooden staff. The inventory is also filled with various items like blocks, food, and tools. The background is a dark, textured surface.

# Character Select and Power ups

# Character Select

- Allows player to fully see the Character and any advantages Or power ups they might have
- How do you indicate the selected character?
- What are the abilities and advantages, Names give a face and depth to the character
- Skins, powerups, upgrades?

# You Got a PowerUp!

Another important part of game Progression is to indicate when a Character has power-upped or Leveluped, this can be achieved in A variety of ways

- Flashy colors/ sparks
- Sound effects
- Stacked visuals/animations

BE CONSISTENT WITH YOUR CHOICES

# UI Design Activity!!

- Your group will be given a game with systems and mechanics
- It's your job to design intuitive UI for these systems
- Describe how it will look and behave, then draw out what it will look like on paper
- Iterate! Improve on your ideas to make them more streamlined and intuitive to the player!

# Exit Survey:

Fig. 1: *Homer dislikes exit surveys.*
